ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a skin cosmetic having improved active oxygenscavenging activity, and capable of suppressing the oxidation of skin cells and exhibiting bleaching effect by compounding an extract obtained through extraction from a polyphenol-containing plant and an extract from parsley in combination.

SOLUTION: (A) One or more kinds of extracts obtained from a polyphenol-containing plant (e.g. fruits such as apple, grape or strawberry, or their seeds, or beans such as red beans or soybeans) or the like and (B) an extract obtained from parsley are formulated. The extraction can be carried out by using an extraction solvent such as water, a polyhydroxy alcohol like glycerin, or a lower alcohol like ethanol. Further, it is preferable that the formulation amount of the component A is 0.0001-5.0 wt.% and that of the component B is 0.001-5.0 wt.% based on the total weight of the skin cosmetic, and the formulation ratio of the component A to B is 0.01-100.0 in component A/component B.
